

Subscriber Lifetime Value by Cohort

Same cohorts and same rule as the retention analysis (renewal counted if paid within 7 days of its due date; subscribers not yet 7 days past due are excluded from that stage), but measured in dollars: how much each subscriber has paid in total and how much of it is left after product, shipping, fees and handling. Contribution is what has to pay back the ad cost of acquiring the subscriber.

\$80

average first order per subscriber · \$5 contribution

\$112

cumulative revenue through renewal 1 (128 subscribers due) · \$24 contribution

\$121

cumulative revenue through renewal 2 (11 due) · \$33 contribution

\$112

lifetime revenue per subscriber to date, all 233 · \$23 contribution vs \$158 average cost per subscriber

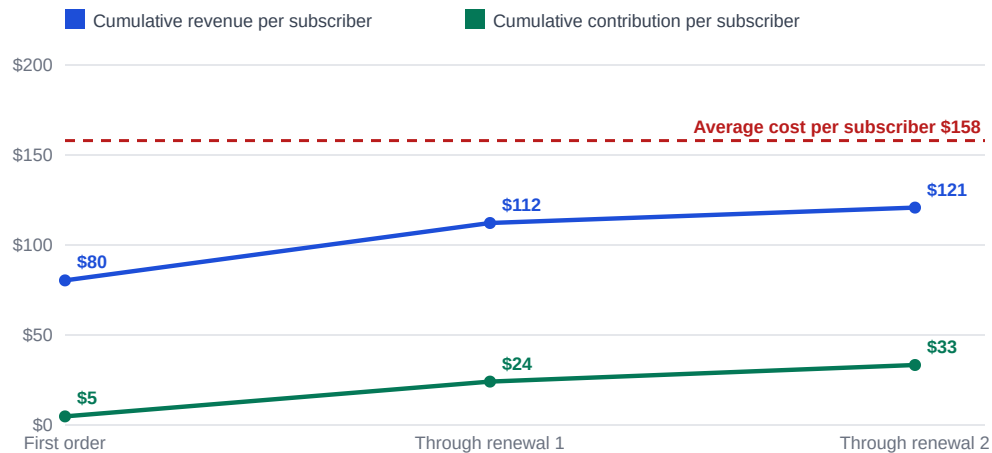

Cohorts by start week

Start week · offer	Subs	Cost per sub (Meta)	First order, per subscriber		Through renewal 1, per subscriber			Through renewal 2, per subscriber			Contribution as % of cost per sub
			Revenue	Contribution	Due	Cum. revenue	Cum. contribution	Due	Cum. revenue	Cum. contribution	
Jul 13–Jul 19 Free \$120 diffuser + \$39.95/mo (launch)	11	\$295	\$70	\$5	11	\$99	\$21	11	\$121	\$33	11%
Jul 20–Jul 26 Free \$120 diffuser + \$39.95/mo	18	\$150	\$65	\$0	18	\$80	\$8		not due		5%
Jul 27–Aug 02 Free diffuser + \$39.95/mo → \$49.95/45d	48	\$87	\$68	−\$0	48	\$101	\$20		not due		22%

Sep 14–Sep 20 Kits 2+3 / 3+4, mostly no sub	9	\$337	\$103	\$12		not due			not due		—
Sep 21–Sep 27 Current: \$49.95/scent, free diffusers	9	\$275	\$98	\$19		not due			not due		—
All subscribers	233	\$158	\$80	\$5	128	\$112	\$24	11	\$121	\$33	15%

"Through renewal 1" averages over the subscribers whose renewal 1 was due, whether or not they paid it, so it already includes the drop-off. The last column uses the latest stage with at least 5 subscribers due. Cost per subscriber is that week's Meta spend divided by subscribers acquired; the total row uses the July–September average of \$158.

LTV curve, all subscribers

Contribution has to reach the dashed line for a subscriber to pay for their own acquisition. Through renewal 2 the average subscriber has returned 21% of it.

Customers by how far they got

Stage reached	Customers	Share	Avg revenue	Avg contribution	Total revenue	Total contribution	% of \$158 CAC
Only the first order so far (no renewal paid) 43 of these were due and did not pay; 67 are not due yet	110	47%	\$94	\$9	\$10,341	\$1,016	6%
On their 2nd order (1 renewal paid) avg renewal order \$57	113	48%	\$126	\$36	\$14,283	\$4,018	23%
On their 3rd order (2 renewals paid) avg renewal order \$44	10	4%	\$136	\$42	\$1,358	\$422	27%

Revenue here is everything the customer has paid to date, including duplicate first orders and add-ons.

Read-out

- **The first order does not pay for anything.** The average subscriber pays \$80 up front and leaves \$5 after the diffuser, scent, shipping and fees. Cohorts on the \$39.95 single (Jul 20, Jul 27, Aug 17) start at zero or slightly negative.
- **Each paid renewal is worth about \$57 of revenue and \$30 to \$35 of contribution.** A customer on their 2nd order has produced \$36 of contribution on average (23% of the cost to acquire them); on their 3rd order, \$42 (27%).
- **Payback needs 5 to 6 paid renewals** at today's costs and prices. The Jul 13 launch cohort, the only one two renewals deep, has returned \$33 per subscriber against a \$295 acquisition cost.

- **The build-your-kit cohorts (Aug 10, Aug 17) have the best LTV so far:** \$36 to \$41 of contribution per subscriber through renewal 1, because they carry more scents per delivery and renew at a higher rate, and they were bought at \$87 to \$125.
- **43 customers were due a renewal and never paid one.** They generated \$10,341 of revenue in total and are the group where payment recovery would move LTV the most.

The LTV number to plan with today: about \$23 of contribution per subscriber to date, heading toward roughly \$60 to \$70 once the August cohorts complete their second renewal if retention holds at 60% to 70%. At \$22.50/\$4.50 costs and 80% recovery, the same subscriber reaches \$100+ within three cycles and the \$87 acquisition weeks become profitable inside a quarter.

Data as of September 25, 2026. Contribution = order value – product cost (diffuser \$26, scent \$9, kit costs per the runbook) – \$7.50 shipping – processing fees – \$1 handling. Ad cost is not deducted; it is shown as cost per subscriber.
